

I. Introduction – Opening a presentation

Analyze the framework

- Please read both the presentations below. The two speakers are using the same framework to open their presentations. Analyze them, and write your findings in the following flow chart.

Presentation 1	Presentation 2
1. Good morning, ladies and gentlemen. First of all, let me thank you for being here today. I'm glad that so many of you could come, especially since I know that this time of the year is probably the busiest for you. 2. Let me introduce myself. My name is Don Taylor. I'm the head of the logistics here at Air Spares. 3. I'm here today to present our new semi-automatic shelving system. 4. My talk is particularly relevant to those of you who place orders for the different parts we supply. 5. In my presentation I'll focus on three major issues. First of all, I'll describe the various packages in detail. After that I'll show you some case studies finally, I'll discuss how you can choose the best plan to meet our customers' needs.	1. Good morning. I'm aware that you all have very tight schedules, so I appreciate you taking the time to come here today. 2. As you probably know, my name is Susan Webster. I'm the project manager in charge of the Bak Tower building project in Dubai. 3. This morning I'd like to update you on the current status of work at the construction site. 4. The information I give you today should help you with planning your next steps. 5. I've divided my presentation into three parts. I'll start off by showing you some photos of the buildings site and discussing the progress we've made since January. Then I'll move on to the problems we're facing with your local suppliers. I'll end with some ideas for reducing labor costs that we've been looking into.

6. It should take about 50 minutes to cover these issues.	6. My talk should take about 30 minutes.
7. Also, there will be time for questions after my presentation.	7. Please feel free to interrupt me at any time with questions.
8. Does everybody have a handout? Please take one, and pass them on.	8. Oh, and don't worry about taking notes. I'll be handing out copies of the PowerPoint slides.

II. Main part (Bodies)

Activities

- A. Read the following sample where the speaker is presenting the main part of his topic.

Sample -- Presenting the Main Part

1. OK, so that's the background and the reason we developed the program. Any questions? OK. So, let's move on to the next point and take a closer look at the Traffic Support Center itself. As I said earlier, the TSC was set up in 2001 to help traffic flow more smoothly, and basically to make the lives of motorists easier. In this part of my presentation, I'd like to tell you about the center's activities, how we work exactly and how motorists benefit from our services.
2. So, let me give you a brief overview of the TSC's activities. Our main activities are to collect, analyze, and communicate traffic information. After collecting traffic data from a number of different sources, we analyze them and then we inform the media, the police, or other authorities, and – last but not least – the motorists. (...) So much for the overview.
3. This now leads us to my next point. How does the TSC collect data? Traffic-monitoring equipment has been installed across the main traffic routes, which helps us gather real-time information on traffic speed and traffic flow. Additionally, we use variable traffic sensors and cameras. We also work together with other partners and authorities, for example the police, traffic officers, and the media. Let me show you a few examples of how this works. (...) collecting data. This brings me to the end of my second point.
4. Let's now turn to the next issue. How do we communicate information to motorists? We do this in a number of ways: by using electronic road signs, the Internet and radio, and state-of-the-art telephone technology. (...) So that's how we communicate with motorists.
5. Let me now come back to what I said earlier. The TSC wants to make the lives of motorists easier. So, in what ways does the motorist benefit? Well, ... first: through real-time information about the traffic situation. Second, through better advice about alternative routes. Third, through safer roads and less driver stress.

- B. “Signposting” phrases are used to help guide the audience through a presentation. Based on the sample presentation above, complete this box with highlighted phrases in the sample.

<i>Signposting used in MAIN PART</i>
Saying what is coming 1. <u><i>In this part of my presentation, I'd like to tell you about...</i></u> 2. _____
Moving on to the next point 1. This leads directly to the next part of my talk. 2. _____ 3. _____ 4. _____
Indicating the end of a section 1. This brings me to the end of my second point. 2. _____ 3. _____
Referring back 1. As I mentioned before, ... 2. _____ 3. Let's go back to what we've discussing earlier. 4. _____
Summarizing a point 1. I'd like to sum up the main points. 2. Let me briefly summarize what I've said so far.

III. Conclusion

<i>Signposting used in CONCLUSION</i>
Indicating the end of your talk I'm now approaching/nearing the end of my talk/presentation. Well, this brings me to the end of my presentation. That covers just about everything I wanted to say about... OK, I think that's everything I wanted to say about... As a final point, I'd like to... Finally, I'd like to highlight one key issue.
Summarizing points Before I stop, let me go over the key issues again. Just to summarize the main points of my talk... I'd like to run through my main points again... To conclude/In conclusion, I'd like to ... To sum up, we...
Making recommendations We'd suggest... We therefore (strongly) recommend that ... In my opinion, we should... Based on the figures we have, I'm quite certain that...
Inviting questions Are there any questions? We just have time for a few questions. And now I'll be happy to answer any questions you may have.

Sample

Well, this brings me to the end of my presentation. Before I stop, let me highlight the key question again: do we need a digital telephone system or can we upgrade the existing one? As I've shown in my brief presentation today, we must invest in the new system; an upgrade is just not feasible. I'd just like to finish with something former US president Bill Clinton once said: "You can put wings on a pig, but you don't make it an eagle." And now I'll be happy to answer any questions you may have.
